Requirements

You should have well knowledge of Flutter to build apps from it

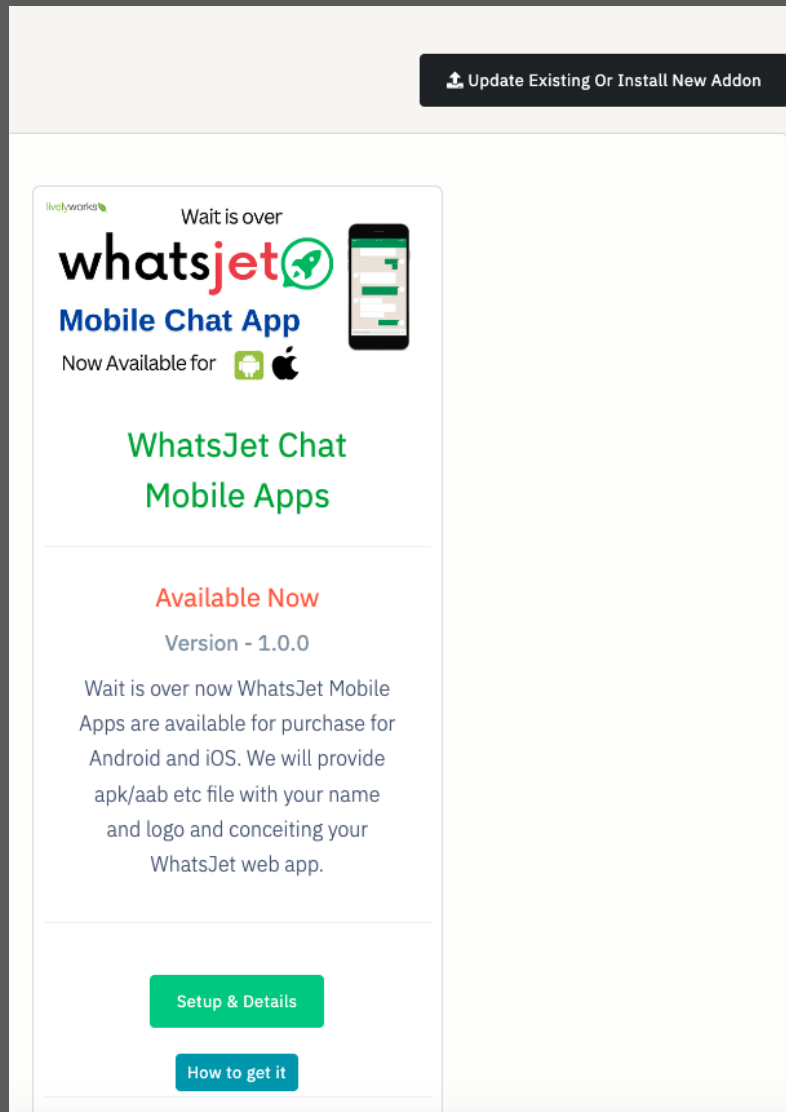

1. To build mobile application one should have WhatsJet (5.8.0 +) web version. As this mobile application directly consumes data from existing WhatsJet application.
2. Other technical requirements will be as per the flutter: <https://docs.flutter.dev/get-started/install>

Package Contents

- 1) Installation-and-setup-guide.pdf – This guide shows how to use it
- 2) WhatsJetChatMobileApp.zip – Addon Zip file to activate Mobile for Web application
- 3) Source – Flutter App Source Code

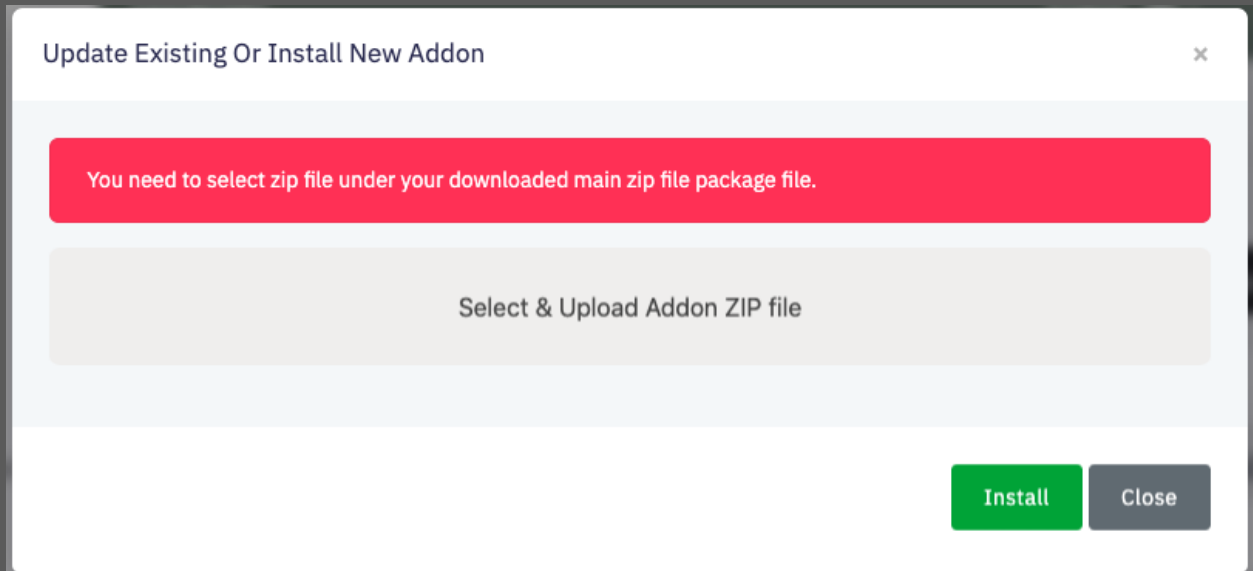

Install WhatsJet Chat Mobile App

To use WhatsJet Chat Mobile App visit Addons page on WhatsJet Web by click on **Addons** option from sidebar. On this page you see the button as Update Existing or Install New Addon using it you need to upload **WhatsJetChatMobileApp.zip** file found under the downloaded package.

Install WhatsJet Chat Mobile App Addon

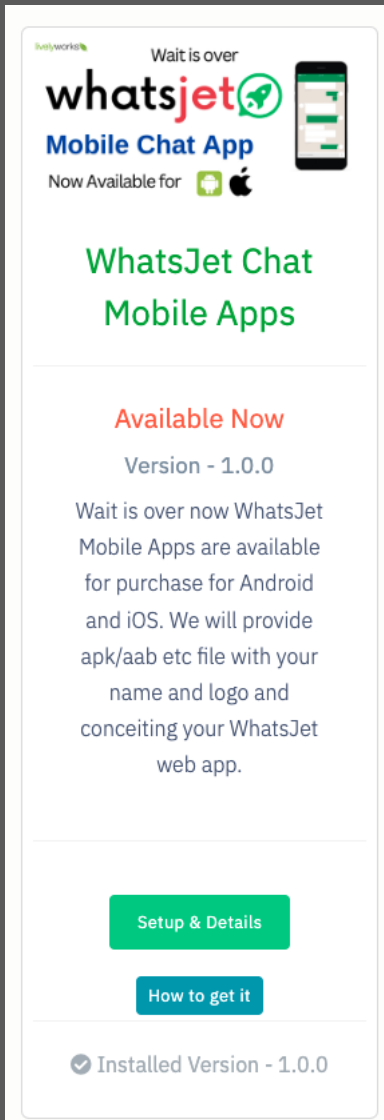

- To install WhatsJet Chat Mobile App or update existing you need to click on Update Existing or Install New Addon button.

- **Select & Upload Addon ZIP file** – Using this you need to select & upload the **WhatsJetChatMobileApp.zip** this zip file to install the WhatsJet Chat Mobile App.
- **Install** – By click on this button your uploaded WhatsJet Chat Mobile App zip file will get installed.

Mobile App Web Part Setup & Details

Once you successfully install the WhatsJet Chat Mobile App add-on then you need to setup that.

Flutter Project Preparations

Once you open folder in VS Code you may need to run following command to get package update:

```
flutter pub get
```

We assume that you already have **WhatsJet** web application working on your server (Example. URL: <https://yourwebsite.com/>)

You need to login as super**admin** on the site and Mobile app menu item from sidebar. It will take you to Mobile App Configuration page, where you need to copy the generated code from paste it to [/lib/support/app_config.dart](#)

You may want to change some items of choice, please do so. And avoid to change any items in between [do not change](#) section

Turn off debug mode for the production.

Make it yours

App Name

Change App Package Name with single command.

```
dart run rename_app:main all="Your App Name"
```

App Package Name

Change App Package Name with single command.

```
dart run change_app_package_name:main com.new.package.name
```

App Icons

You can update or replace the file for the icon at [assets/images/icon.png](#) It should be size of 1024X1024 & it should be PNG, If you want to change the name or the location of the file you may need to change in pubspec.yaml under the [flutter_icons](#) you need to run following command once you change the image.

```
dart run flutter_launcher_icons
```

App Splash Page logo and brand logo

You can add, update or replace the files for the splash screen logos at [assets/images/](#) It should be PNG, If you want to change the name or the location of the file you may need to change in pubspec.yaml under the [flutter_native_splash](#) you need to run following command once you change the image.

```
dart run flutter_native_splash:create
```

Publishing

Follow the instructions as given in Flutter guide for releasing the apps:

Android

<https://docs.flutter.dev/deployment/android>

iOS

<https://docs.flutter.dev/deployment/ios>

Flutter Help

For any type of flutter commands and help please do visit official documentation at

<https://docs.flutter.dev/>
